

## Company Profile **AirLog GmbH**

AirLog was founded in 2000 as spin-off of the well-known German Fraunhofer Institute for Material Flow and Logistics (IML). Due to their previous professional activities and our close ties to the Fraunhofer Institute, our staff benefits from a year-long logistical expertise with a special focus on air- and rail transportation. The team, which has been carefully assembled based on the needs of the customers and the requirements of the projects, creates interbranch and client-specific solutions for a multitude of logistic fields.

Main target is the optimum combination of infrastructure and logistics in order to generate best-performing solutions for our customers.

Our interdisciplinary team of logistic experts, computer scientists, spatial - and transportation planners and architects offers a wide range of solutions, in particular concerning

- logistical expertises and feasibility studies,
- preliminary planning stage: project preparation and –planning according to HOAI Phase 1 and 2,
- development of optimized processes and facilities for airports and other logistics and transportation hubs,
- user-focused project management to ascertain the implementation of logistical and transportation infrastructures and facilities according to schedule and specifications,
- spatial and transportation-related studies,
- planning and implementation of IT-systems according to the design specification set forth by the customer,
- restructuring and redesign of the internal organization structures of companies and other large entities.

This broad range of services and expertises permits our customers to benefit from a one-stop shop offering integrated solutions from the initial vision to the final commissioning.
